

The Wind That Came and Went 🌬️

A Story About Breezes, Sea Breezes, and Land Breezes

Mia and Ethan were spending a sunny afternoon at the beach with their family.

They built sandcastles, searched for seashells, and listened to the waves crashing onto the shore.

Suddenly, Mia felt a cool wind brush across her face.

“It feels so nice!” she said.

Ethan smiled as the wind gently moved his hair.

“What is this gentle wind called?”

Their dad smiled.

“That gentle, pleasant wind is called a breeze.”

“But where does it come from?”

“Let’s find out together.”

What Is a Breeze?

Their dad picked up a colorful ribbon from their beach bag.

He held it in the air.

The ribbon fluttered gently.

“A breeze is a gentle, pleasant wind,” he explained.

“It isn’t very strong, but you can feel it on your skin.”

Mia watched the palm trees sway.

The beach umbrella moved just a little.

“The breeze is making everything move!” she laughed.

The Daytime Sea Breeze

The afternoon sun became warmer.

Their dad drew a simple picture in the sand.

“The land heats up faster than the sea during the day,” he explained.

“The warm air above the land rises.”

“Cooler air from over the sea moves toward the land to take its place.”

“That moving air is called a **sea breeze**.”

Just then, another cool breeze blew across the beach.

Mia smiled.

“So the sea is sending cool air to us!”

🌿 The Nighttime Land Breeze 🌿

That evening, the family stayed to watch the sunset.

The air felt different.

Their dad pointed toward the ocean.

“After sunset, the land cools down faster than the sea.”

“Now the air above the sea is warmer and rises.”

“So cooler air from the land moves toward the sea.”

“That gentle wind is called a **land breeze**.”

Ethan watched the leaves move toward the water.

“**The breeze changed direction!**”

“It sure did,” Dad said.

🌿 The Wind's Daily Journey 🌿

The next morning, Mia and Ethan visited a nearby park with their family.
Mia held up a colorful paper pinwheel.

It began to spin in the gentle breeze.

Nearby, tree branches swayed softly.

Flowers nodded in the wind, and a kite floated high in the sky.

Dad smiled.

“Warm air rises.”

“Cool air moves in to replace it.”

“That’s how wind begins.”

“Sometimes the wind is strong.”

“And sometimes it’s just a gentle breeze.”

Mia watched her pinwheel spin faster.

“So every breeze is part of nature’s daily journey!”

SCIENCE ELEMENT

BREEZE

A breeze is:

- Gentle
- Pleasant
- Slow-moving wind

YOU MAY NOTICE A BREEZE WHEN:

Leaves gently move

Flags softly wave

You feel cool air on your face

SEA BREEZE (DAY)

During the day:

- The land heats up faster than the sea.
- The warm air above the land rises.
- Cooler air from the sea moves toward the land.

This moving air is called a **sea breeze**.

DIRECTION
SEA → LAND

LAND BREEZE (NIGHT)

At night:

- The land cools faster than the sea.
- The warm air above the sea rises.
- Cooler air from the land moves toward the sea.

Warm air rises

Cool air moves in

This moving air is called a **land breeze**.

DIRECTION
LAND → SEA

Warm air is lighter, so it rises.

WHY DO BREEZES FORM?

Cool air is heavier, so it moves in to replace the warm air.

This movement of air creates wind.

When the wind is gentle and pleasant, we call it a **breeze**.

REMEMBER

A breeze is a gentle, pleasant wind.

During the day, a **sea breeze** blows from the **sea** to the **land**.

At night, a **land breeze** blows from the **land** to the **sea**.

Warm air rises, cool air moves in, and that's how breezes are formed.
